Cleanup Progress Summary

Early Action
Initiated/Completed Underway

Physical cleanup activities have started.

[view detailed list of cleanup activities at this site >>](#)

The National Priorities List (NPL) is the list of the most hazardous sites across the U.S. and its territories.

This site is on the NPL and is known as a Final NPL site ([see glossary](#)).

Superfund law requires that EPA give communities information about site progress and plans so that they can be actively involved in site cleanup decisions. [Learn more about community involvement at this site >>](#)

Cleanup Impact Summary

At each site, EPA assesses the risk to humans and the environment and determines the best approach to address the risk. During initial site studies and cleanup, EPA determines if current human exposures to contaminants are under control and takes actions to control any possible human exposures until cleanup has been completed. Once complete, cleanup provides long-term human health and environmental protection at the site.

EPA is working to determine whether there are human exposures to contaminants

[see glossary definition for "Human Exposure Environmental Indicator Measure." >>](#)

At each site with known ground water contamination, EPA documents whether ground water contamination is below protective risk-based levels or, if not,
